**Topology of the moduli space of real  
algebraic curves of genus 0 with  $n$  labeled points**

ABSTRACT: The Deligne–Mumford compactification  $\overline{M}_{0,n}$  of the moduli space of algebraic curves of genus 0 with  $n$  labeled points is a smooth projective variety defined over  $\mathbb{Q}$ . The topology of the complex locus of this variety,  $\overline{M}_{0,n}(\mathbb{C})$ , is well understood, thanks to the works of Keel, Kontsevich–Manin, Getzler, and others. I will concentrate on the less well known topology of the real locus,  $\overline{M}_{0,n}(\mathbb{R})$ , which was studied in the works of Kapranov, Devadoss, Davis–Januskiewicz–Scott, and others. In particular, I will describe the structure of the rational cohomology algebra of this manifold, its Poincaré polynomial, and the homology operad, following my joint work with A. Henriques, J. Kamnitzer, and E. Rains. This talk should be accessible to anyone familiar with basic algebra and topology.

MONDAY, 23 NOVEMBER 2010

LECTURE AT 4:00 PM

COFFEE, TEA, AND REFRESHMENTS FROM 3-5 PM

ROOM 617, WACHMAN BUILDING

DEPARTMENT OF MATHEMATICS
